Meeting Jul 31, 2026 at 11:25 UTC

Summary

Health and wellness dashboard prototype reviewed and renamed with strategy established for future department scalability.

Dashboard prototype functional review

Prototype system dashboard displays medical surveillance and occupational metrics. Interface allows manual data entry and mobile device access for field compliance tracking.

Module rebranding and structure

Decision made to rename the infirmary module to Health and Wellness Officer. System architecture supports tiered access rights for managers and directors.

Scalability and reporting metrics

System expansion plans involve utilizing placeholders for broad departmental integration. Additional safety targets and incident tracking metrics were integrated into the dashboard design.

Decisions

Aligned

- **Rename Infirmary module** The "Infirmary" module in the system will be renamed to "Health and Wellness Officer" to better align with the required terminology.
- **Add public dashboard viewing** The dashboard will include a browsing feature that allows users to view data without requiring specific access rights.
- **Prioritize Health and Wellness development** Development is prioritized to stabilize the "Health and Wellness" module, while incorporating placeholders for other departments (Workplace Safety, Environment, Sustainability, and Quality) to demonstrate future scalability.
- **Add safety metrics to dashboard** The dashboard will display statistics and trends for zero fatalities, zero workplace injuries, total recordable incidents, and total incidents investigated.

We've **updated the Decisions section** using your feedback.

Let us know what you think: [Helpful](#) or [Not Helpful](#)

Next steps

- ☐ [AKANGA ANDREW] Build stable prototype: Develop a stable version of the system accessible via laptop for review.
- ☐ [Benard Okanyakure] Send details: Share photographs containing specifics for workplace safety, environment, and quality inspection parameters.
- ☐ [AKANGA ANDREW] Add placeholders: Include sections for workplace safety, environment and sustainability, plus quality inspection and testing as placeholders in the system.
- ☐ [AKANGA ANDREW] Share screenshots: Provide visual records of system features to facilitate presentation to the IT team.

- ☐ [AKANGA ANDREW] Update dashboard: Incorporate metrics for zero fatalities, zero workplace injuries, total recordable incidents, and investigated incidents into the dashboard view.
- ☐ [AKANGA ANDREW] Rename infirmary: Change the label of the doctor side to health and wellness officer.
- ☐ [AKANGA ANDREW] Create viewing roles: Implement restricted access profiles allowing directors and managers to view data without entry privileges.

Details

- **Prototype Dashboard Overview:** AKANGA ANDREW presented a prototype system dashboard designed for managing health and wellness data. The interface displays Key Performance Indicators including surveillance completion for medical checks, occupational disease cases, health-related absenteeism, hygiene compliance, and economic risk control. The dashboard is intended to provide visual trends on absenteeism and health surveillance, as well as alerts for measurements exceeding averages, such as noise levels or air quality.
- **System Data Entry and Mobile Accessibility:** The system allows for manual entry of monthly data concerning the number of employees and health-related days lost. For environmental monitoring, such as PM values and noise levels, users can input specific location-based measurements and save them. The platform is designed to be accessible via mobile devices, allowing staff to record compliance status for various zones as compliant, partially compliant, or non-compliant, and to suggest corrective actions.
- **Health and Wellness Module:** AKANGA ANDREW demonstrated the module formerly referred to as the infirmary, which allows for patient registration and visit documentation. The system captures details such as patient name, age, organization, and job title. Users can record visit types, including whether the visit is work-related, and log specific medical data such as present illnesses, past medical history, and treatment plans. These records allow for the tracking of patient history and follow-up requirements.
- **Access Rights and Future Scalability:** Benard Okanyakure inquired about future system expansion and user roles. AKANGA ANDREW confirmed that the

system is built to allow for feature improvements over time. To address organizational hierarchy, AKANGA ANDREW proposed creating specific roles for managers and directors that grant viewing rights to the dashboard and reports without providing data entry privileges.

- **Naming Conventions and System Structure:** Benard Okanyakure requested renaming the infirmery section to "Health and Wellness Officer" to ensure the title is general and appropriately reflects the division. AKANGA ANDREW agreed to this change and emphasized the importance of establishing a structured, stable base for the Health and Wellness module before deployment to minimize complications with organizational bureaucracy.
- **Technical Presentation and IT Integration:** AKANGA ANDREW committed to providing screenshots of the system to assist Benard Okanyakure in presenting the proposal to the company's IT team. This presentation aims to demonstrate the system's ease of use and features while acknowledging that any future deployment will need to align with the IT team's technical standards, such as their use of the Go programming language.
- **Expanding to Department of Quality, Health, Safety, and Environment:** Benard Okanyakure stated a goal to eventually expand the system to cover the entire Department of Quality, Health, Safety, and Environment. AKANGA ANDREW recommended using placeholders for remaining units, including Workplace Safety, Environment and Sustainability, and Quality Inspection and Testing, until the specific parameters for those departments are standardized. This strategy allows for the immediate implementation of the standardized Health and Wellness module while preparing the system for future growth.
- **Additional Dashboard Metrics:** Benard Okanyakure requested the addition of specific safety targets and metrics to the dashboard, including zero fatalities and zero workplace injuries. Additionally, Benard Okanyakure required tracking for the total number of recordable incidents and the total number of incidents investigated. AKANGA ANDREW agreed to incorporate these data points into the dashboard for executive review.

You should review Gemini's notes to make sure they're accurate. [Get tips and learn how Gemini takes notes](#)
